Interpreting ACT Data for Student Success

Knowing when, where, and how to support students requires more than access to data but a deep understanding of data to develop actionable insights.

Attend this ACT workshop designed for educators, counselors, and administrators and learn how to:

- Understand the data delivered in the ACT High School Report and ACT Profile Report
- Derive insights for curriculum, instruction and student support improvements
- Enhance student success by learning about the positive effects of measuring social-emotional learning
- Use OpenEd, a new offering from ACT, delivering educators and students with a robust personalized learning library that goes above and beyond what Khan Academy offers.

In addition to learning strategies that are immediately useful at your school, ACT will share the additional features and capabilities currently planned to enhance educators' abilities to prepare students for college and careers. Planned features include:

- ACT data and reports made available to authorized schools staff, district administrators and state clients which will include both National and State and District testing records
- Student level data with the ability to filter
- Aggregate reports posted to the online reporting system
- And more!
